**Subject:** 31 Aug 2017 -- ASPECT update 7 -- 1035  
**Date:** Thursday, August 31, 2017 10:48:49 AM

---

ASPECT is airborne. Est on station at 1150. The system will remain on station until released by the OSC. A suitable airport has been located for fuel and data download.

The primary objective for this mission will be prolonged monitoring of the scene. We will be pulling spectral data in-flight and imagery as the conductivity permits.

We are updating the report at this time will full resolution images. All data collected on the flight is being processed and will be updated to the n-link and ftp site. I will advise when these products are being uploaded.
